

The challenge of improving patient adherence while delivering increased business results for your pharmacy

Medication Synchronization

Medication nonadherence is a systemic problem that costs more than \$300 billion a year in the US and accounts for more than 10% of total national healthcare spending. Pharmacies and pharmacists play a pivotal role in combatting nonadherence. However, given the continuing effects of the COVID-19 pandemic and the range of operational hurdles they face daily, pharmacies are fighting an uphill battle.

EnlivenHealth™ Medication Synchronization: The proven patient engagement and medication management solution that drives substantially improved health outcomes and business performance

Medication Synchronization (Med Sync) from EnlivenHealth™ is an appointment-based solution that transforms pharmacy innovation and workflow processes. Med Sync aligns a patient's chronic medications to a single refill date, allowing you to effectively plan for ongoing administration of other valuable services, such as vaccinations, point-of-care testing and Medication Therapy Management counseling.

Improve medication adherence while strengthening your long-term business health

By simplifying when your patients refill and pick up their medication, EnlivenHealth™ Med Sync is a powerful adherence tool that provides an unprecedented opportunity for your pharmacy to influence PDC scores and drive script growth. The increase in PDC scores enables pharmacies to demonstrate value to health plans and be compensated for Star Ratings' performance improvement.

EnlivenHealth™ Med Sync has been associated directly with higher adherence, lower inpatient utilization, and a 9% reduction in medical costs related to hospital admissions and emergency department visits.

Achieve better patient health outcomes while improving operational efficiencies

Our Med Sync appointment-based model reduces the number of walk-in patients, freeing up staff time and allowing the pharmacy to transition from an operationally reactive and transactional business model to a proactive, patient-centered approach. The result is improved staff effectiveness and satisfaction, operational efficiencies, and patient health outcomes.

Key benefits of Medication Synchronization from EnlivenHealth™

- **Increased Patient Satisfaction** – Frees up time for the pharmacist to explain how the medication works and how patients can avoid side effects
- **Drive Script Growth** – Appointment-based medication management can lead to 2 to 3.5 additional prescription refills per participating patient over the course of a year
- **Operational Efficiency** – Coordinates patient's chronic prescriptions for monthly scheduled pick-ups rather than disrupting the pharmacy with multiple patient visits during the month
- **Clinical Decision Support** – Ensures that pharmacies accurately target populations with clinical interventions that can measurably improve medication adherence and PDC score
